IZMA ANWAR

Senior Full Stack Developer | Senior .NET Developer

+92 331 7475 663 • izmaanwar005@gmail.com • https://www.linkedin.com/in/izma-anwar-2a0125164/

Summary

With over **6 years of experience** in backend engineering, I bring proven expertise in delivering scalable, production-ready systems for SaaS and enterprise products. I have a strong track record of driving measurable outcomes—leading large-scale API modernization that improved performance and reliability, and delivering multiple sub-products that supported **$17M Series A** growth milestone. I'm recognized for ownership, cross-functional leadership, and consistently shipping high-quality solutions in fast-paced, distributed environments.

Education

Punjab University College of Information Technology, Lahore — Lahore, Pakistan

Bachelor's Degree in Computer Science — 2019 - 2013

Punjab Group Of Colleges — Sahiwal, Pakistan

Higher Secondary Certificate (HSSC) / Intermediate (F.Sc Pre-Engineering) — 2013 - 2015

- **Bronze Medalist** – Awarded for academic excellence among top board performers

Skills

Technologies And Architecture: C#, .NET Core, ASP.NET Core, MVC/Web API, ASP.NET, Entity Framework Core, LINQ, REST APIs, GraphQL ,Microservices, Event-Driven Architecture, DDD, CQRS, SOLID, Background Services, Cron Jobs , Mediator Pattern
Frontend/UI And Frameworks: Angular, HTML, CSS, Razor, Bootstrap, TypeScript, JavaScript, Blazor
Messaging and Databases: RabbitMQ, SQL Server, MySQL, Redis , Postgre SQL
Cloud And DevOps: AWS (EC2, Lambda, S3, RDS, CloudWatch , Redshift , EKS), Azure (DevOps, Pipelines, and App Service deployments), Docker, GitHub Actions, OpenShift, Nginx, API Gateway, IIS , Jenkins , Kubernetes
Testing: Unit Testing(xUnit) Code Coverage, Integration Testing, E2E API Testing
Code Quality & Analysis: SonarQube
Logging: NLog, Serilog, Log4Net, CloudWatch, Application Insights, OpenTelemetry, File-based Logging
Tools: Visual Studio, Visual Studio Code, SQL Server Management Studio, Git, Jira , Bitbucket , Postman/Swagger
Agile & Collaboration: Scrum, Kanban, Jira, Confluence, Code Reviews, Mentorship, Sprint Planning

Experience

Folio3 Software — Lahore, Pakistan

Senior Software Engineer — 2023 - Present

- **UI Development (Blazor & Syncfusion):** Utilized advanced Blazor features to enable customizable user settings, grid configurations, and layout preferences, and integrated Syncfusion components for interactive dashboards, advanced dropdowns, and responsive UI elements.
- **Caching & Performance (Redis Cache):** Implemented Redis Cache to store and share Admin app data across multiple applications, improving system performance and response time by **35%** and reducing redundant requests.
- **Architecture Design:** Implemented **CQRS** pattern separating read and write pipelines, improving scalability and reducing API response time by approximately 20%. Applied the Repository Pattern to maintain modular, clean, and reusable data access logic.
- **Monitoring & Tracing:** Configured OpenTelemetry with Azure Monitor for distributed tracing and structured logging, reducing debugging time by approximately **30%**.
- **CI/CD Automation (Azure DevOps):** Implemented automated build, test, and deployment pipelines via Azure DevOps, improving deployment efficiency and reducing manual intervention by **70%**.
- **Code Quality & Analysis (SonarQube):** Integrated SonarQube with Jenkins pipelines to continuously analyze, review, and improve code quality, resulting in a **90%** improvement in code maintainability and cleaner, more reliable builds.
- **Cloud Deployment & Kubernetes Readiness:** Containerized services using Docker and deployed to **AWS EKS (Kubernetes)**, implementing liveness/readiness probe**s** to ensure stable deployments and faster recovery.
- **Data migration**: Utilized **GraphQL** APIs to extract and migrate data from Shopify (Products, Orders, Customers, and Locations) into SQL-based staging tables for downstream processing.
- **Transactional & Analytics Data Architecture:** Designed a hybrid data architecture using **PostgreSQL** for transactional workloads and **AWS Redshift** for forecasting and analytics pipelines, enabling efficient operational processing alongside scalable reporting and insight
- **Worker services**: Created background workers to automate data synchronization between **Shopify** and **DAX**, handling scheduled updates, error retries, and large-volume data transfers efficiently.
- **Leadership & Agile Delivery:** Led a cross-functional team of five (four developers, one QA), managing sprint planning, daily standups, and client discussions. Actively participated in requirement analysis, task assignment, and mentoring, ensuring timely delivery of production-ready releases.
- **Tech Stack**: NET Core, ASP.NET, ASP.NET Core MVC/Web API, C#, SQL Server, Blazor, Azure services (Azure DevOps, CI/CD pipeline), Redis , Jenkins , SonarQube

Experience

Rolustech — Lahore, Pakistan

Senior Software Engineer — 2019 - 2023

- **Founding Backend Engineer**: Founding Backend Engineer for LexCheck, an enterprise contract management platform, built on **.NET Core** and Clean Architecture.
- **Document Parsing Engine**: Built a parsing engine in .NET Core using ANTLR and **OpenXML** SDK, enabling automated extraction and transformation of structured data from Word/PDF documents.
- **Document Conversion:** Implemented PDF document conversion using the **Ghostscript** library for reliable and high-quality file processing.
- **API Migration:** Migrated over 420 APIs from ASP.NET MVC 4.8 to .NET 6 microservices, improving scalability, maintainability, and reducing response times by more than 30%.
- **Microservices architecture:** Architected microservices using Clean Architecture, RabbitMQ, and event-driven design to enhance performance, flexibility, and reliability.
- **Design patterns:** Applied the Factory Design Pattern in the email module to eliminate conditional logic, improve code readability, and enhance maintainability by approximately 40%.
- **Email system migration:** Migrated the email handling system from **MailKit** to **MailGun** to overcome bulk email processing limitations, achieving 80% improvement in reliability and delivery performance.
- **Resilience & Reliability:** Implemented retry and resilience mechanisms using Polly, resolving issues caused by system load and improving client satisfaction by 50%.
- **Real-Time Communication:** Integrated **SignalR** to enable real-time push notifications on the client dashboard for instant updates on incoming emails.
- **Revamp Client Side:** Revamped UI/UX design leveraging the latest **Angular** version, incorporating pivotal concepts such as modular components, reactive forms, Directives and efficient routing. Employed advanced Angular features like dependency injection and Observables and **RxJS**, enhancing user experiences through a streamlined and responsive application interface .
- **CI/CD & Cloud Deployment:** Implemented CI/CD pipelines using GitHub Actions and **Docker**, managing deployments on AWS EC2 and Azure to streamline build, test, and release workflows.
- **Leadership & Agile Delivery:** Led a cross-functional team of five (four developers, one QA), managing sprint planning, daily standups, and client discussions. Actively participated in requirement analysis, task assignment, and mentoring, ensuring timely delivery of production-ready releases.
- **Business Impact:** Delivered multiple sub-products that exceeded client expectations and contributed to LexCheck's **$17M** Series A funding led by Mayfield Fund.
- **Tech Stack**: Angular, .NET Core, ASP.NET Core, Web API, C#, MYSQL, AWS Services (EC2, Lambda, S3 Bucket, Cognito, CloudWatch, Redis, RabbitMQ, AWS) , Azure services (Azure DevOps, CI/CD pipeline)
